

Exploratory Testing Session Notes

Application: OrangeHRM Demo

Tester: Oshini Poornima

Date: January 27, 2026

Charter: Explore the Leave Management module

Time: 20 minutes (2:30 PM - 2:50 PM)

WHAT I TESTED:

I explored the Leave module by clicking "Leave" in the sidebar and testing the "Apply" feature where employees request time off.

KEY FINDINGS:

BUG #1: System Accepts Past Dates

- Tried applying for leave on January 1, 2024 (past date)
- System accepted it without any warning
- Severity: Major
- Why it matters: Employees could fake past leave days

BUG #2: Backwards Dates Allowed

- Set From Date as Jan 10 and To Date as Jan 5
- System showed "-5 days" but didn't stop me
- Severity: Major
- Why it matters: Creates invalid records in the system

BUG #3: Can Apply for Same Dates Twice

- Applied for Jan 15-20 twice
- System accepted both without warning about overlap
- Severity: Major
- Why it matters: Creates scheduling conflicts

POSITIVE FINDINGS:

- ✓ Date picker calendar is easy to use
- ✓ Leave balance is clearly displayed
- ✓ Filter and sorting features work well

USABILITY ISSUES:

- "Duration" field doesn't explain if weekends are counted
- No loading spinner when clicking "Apply" button

RECOMMENDATIONS:

1. Add validation to prevent past dates
2. Show error when To Date is before From Date
3. Warn users about overlapping leave requests
4. Add loading indicator when form is submitting

SUMMARY:

Total Bugs Found: 3 major validation issues

Pass/Fail: FAIL - Critical bugs found that need fixing

Overall: Good user interface but needs better form validation
